

Royal Holloway, University of London
Course specification for a postgraduate award
MSc Artificial Intelligence with a Year in Industry (3376)

Section 1 – Introduction to your course

This course specification is a formal document, which provides a summary of the main features of your course and the learning outcomes that you might reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities that are provided. Further information is contained in the University prospectus, and in various handbooks, all of which you will be able to access online. Alternatively, further information on the University's academic regulations and policies can be found [here](#). Further information on the University's Admissions Policy can be found [here](#).

Your degree course in MSc Artificial Intelligence provides progressive structures in which you will be able to gain ever-wider knowledge and understanding, and appropriate skills. Equipped with Artificial Intelligence techniques, today's systems can teach themselves to perform tasks almost as well as humans can. This degree provides you with the foundational knowledge and the practical skills required to operate these disruptive technologies. The flexible nature of the course allows you to choose options and tailor the content of your studies to your interests and needs. Teaching and learning in the course are closely informed by the active research of staff.

On successful completion of the course, you should have an understanding of the area of Artificial Intelligence at a level appropriate for a postgraduate qualification. Whilst being a self-contained degree in its own right, each course provides suitable and recognised qualifications for entry to PhD study in the same or a closely related field.

While Royal Holloway keeps all the information made available under review, courses and the availability of individual modules, especially optional modules are necessarily subject to change at any time, and you are therefore advised to seek confirmation of any factors which might affect your decision to follow a specific course. In turn, Royal Holloway will inform you as soon as is practicable of any significant changes which might affect your studies.

The following is a brief description for some of the most important terminology for understanding the content of this document:

Degree course – Also referred to as 'programme', this term refers to the qualification you will be awarded upon successful completion of your studies. 'Courses' were formerly known as 'programmes' at Royal Holloway.

Module – This refers to the credits you will study each year to complete your degree course. Postgraduate taught degrees at Royal Holloway comprise 180 credits. On some degree courses a certain number of optional modules must be passed for a particular degree title. 'Modules' were formerly known as 'course units' at Royal Holloway.

Section 2 – Course details			
Date of specification update	May 2024	Location of study	Egham
Course award and title	MSc Artificial Intelligence with a Year in Industry	Level of study	Postgraduate
Course code	3376	Year of entry	2024/25
Awarding body	Royal Holloway, University of London		
Department or school	Department of Computer Science, EPMS	Other departments or schools involved in teaching the course	None
Mode(s) of attendance	Full time	Duration of the course	Two years (104 weeks) full-time
Accrediting Professional, Statutory or Regulatory Body requirement(s)	N/A		
Link to Coursefinder for further information:	https://www.royalholloway.ac.uk/studying-here/postgraduate/computer-science/artificial-intelligence-with-a-year-in-industry/	For queries on admissions:	https://royalholloway.ac.uk/applicationquery

Section 3 – Degree course structure				
3.1 Mandatory module information				
The following table summarises the mandatory modules which students must take in each year of study				
Module code	Module title	Credits	FHEQ level	Module status (Mandatory Condonable MC or Mandatory Non-Condonable MNC)
CS5100	Data Analysis	30	7	MC
CS5800	Principles of Computation and Programming (*)	15	7	MC
CS5960	Artificial Intelligence Principles and Techniques	15	7	MC
CS5980	Autonomous Intelligent Systems	15	7	MC
CS5900	Ethics in Advanced Computing and Artificial Intelligence	15	7	MC
CS5822	Individual Project	60	7	MNC

This table sets out the most important information for the mandatory modules on your degree course. These modules are central to achieving your learning outcomes, so they are compulsory, and all students on your degree course will be required to take them. You will be automatically registered for these modules each year. Mandatory modules fall into two categories: 'condonable' or 'non-condonable'.

In the case of mandatory 'non-condonable' (MNC) modules, you must pass the module before you can proceed to the next year of your course, or to successfully graduate with a particular degree title. In the case of mandatory 'condonable' (MC) modules, these must be taken but you can still progress or graduate even if you do not pass them. Please note that although Royal Holloway will keep changes to a minimum, changes to your degree course may be made where reasonable and necessary due to unexpected events. For example, where requirements of relevant Professional, Statutory or Regulatory Bodies have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of external advisors, to enhance academic provision.

Students on the MSc Artificial Intelligence with a Year in Industry will take CS5822 (60 credits). This is completed in year 2, following the work placement. Modules marked with (*) must be taken only by students with weaker skills on the academic subjects covered by the modules.

3.2 Optional modules

In addition to mandatory modules, there will be a number of optional modules available during the course of your degree. Although Royal Holloway will keep changes to a minimum, new options may be offered, or existing ones may be withdrawn. For example, where reasonable and necessary due to unexpected events, where requirements of relevant Professional, Statutory or Regulatory Bodies (PSRBs) have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of External Advisors, to enhance academic provision. There may be additional requirements around option selection; please contact the Department for further information.

Optional modules are chosen from the list provided by the Department to complete each term to a total of 60 credits (for full-time students). Pre-requisites based on prior study or academic background may apply. The list of electives for each student must be approved by the Course Director. In exceptional cases, when timetabling or other administrative reasons prevent them from taking courses worth 60 credits in each term, students will be allowed to take courses worth 75 credits in one term and 45 in the other term.

The full list of modules available for the current academic year can be obtained from the Department of Computer Science.

Section 4 - Progressing through each year of your degree course

For further information on the progression and award requirements for your degree, please refer to Royal Holloway's [Academic Regulations](#).

Progression throughout the year/s is monitored through performance in summative or formative coursework assignments. Please note that if you hold a Student Visa and you choose to leave (or are required to leave because of non-progression) or complete early (before the course end date stated on your CAS), then this will be reported to UKVI.

All postgraduate taught students are required to take and pass the non-credit bearing Moodle-based Academic Integrity module SS1001 in order to be awarded. The pass mark for the module assessment is stated in the on-line Academic Integrity Moodle module. Students who otherwise meet the requirements for award as stipulated in the [Academic Taught Regulations](#) but fail to pass the Moodle-based Academic Integrity module will not be awarded.

The **Industrial Placement**, available only to the eligible MSc Artificial Intelligence with a Year with Industry students, normally takes up to 11 months starting from July. At the end of the placement, the student produces a report, which is submitted and assessed as part of the individual project. Details of the industrial placement are available from the placement handbook.

The decision on progression to the year in industry is taken by the examination sub assessment board. Normally, to progress to the year in industry you must:

- engage with the activities run by the Careers service throughout the year;
- achieve a good result in CS5100 and show good performance in coursework assignments throughout the year (as detailed in the year in industry handbook);

- pass the taught part of the course at the first attempt, i.e., achieve in every taught course the aggregate mark of at least 50% (failure marks between 40-49% can be condoned for a specified number of credits as outlined in the Postgraduate Taught Regulations).

The students who did not satisfy the progression to year in industry requirements or failed to secure a placement in time are transferred to the MSc Artificial Intelligence degree course not involving a year in industry.

Section 5 – Educational aims of the course

The aims of this course are to:

- produce specialists in Artificial Intelligence (AI) technologies who are capable of designing and developing AI solutions for real-world problems, from flying robots to self-driving cars, from machine translation to automatic scheduling;
- provide advance knowledge in a combination of topics such as knowledge representation and engineering, probabilistic reasoning, autonomous decision making, intelligent autonomous systems, natural language processing, machine learning and experimental design, which are the key areas required for professionals in the AI area;
- offer courses in which the teaching of theory and practice in AI is informed by research activity and professional expertise;
- develop an understanding of professional and ethical issues involved in the deployment of AI technologies;
- develop the subject-specific and generic skills and techniques that will facilitate progression to MPhil/PhD studies in artificial intelligence or a related field;
- foster the ability to learn independently, whether for career enhancement, progression to research, or personal intellectual development; and
- provide a strong foundation for a professional career as an AI specialist.

In addition, the Year in Industry course further enables students to gain industrial experience and acquire skills that can only be fully gained in a work environment. It also allows students to develop a better appreciation of how what they have learned relates to real-world problems or situations, and to put into practice the techniques that they will have been taught.

Section 6 - Course learning outcomes			
In general terms, the courses provide opportunities for students to develop and demonstrate the following learning outcomes. (Categories – Knowledge and understanding (K), Skills and other attributes (S), and Transferable skills (*))			
Course Learning Outcome	Term 1	Term 2	Term 3
1. A highly analytical approach to problem solving;	1.1.1 Advanced background in AI principles and techniques, including ethical and social implications	1.2.1 An advanced understanding of autonomous decision making and optimisation techniques	1.3.1 Design and implement AI solutions for real-world complex problems
2. Advanced background in intelligent autonomous systems and related applications	1.1.2 Advanced background in machine learning and data analytics	1.2.2 Use different logical systems for inference over formal domain representations and to trace how a particular inference algorithm works on a given problem specification	
3. Advanced ability to work with state-of-the-art AI tools and technologies	1.1.3 Analyse complex AI systems in terms of their performance, reliability, and correctness	1.2.3 Formalise, design and build autonomous systems and AI applications in open and uncertain environments	
4. Advanced ability to work with software (including software languages such as Python) to develop AI capabilities such as: diagnosis, planning, learning, autonomous decision making, natural language processing	1.1.4 Implement machine learning solutions	1.2.4 Work with modern network management technologies and standards	
5. Advanced ability to work with open-source tools for building AI solutions to real-world problems	1.1.5 Develop, validate, and use effectively machine learning models and statistical models	1.2.5 Based on the elective courses chosen, an advanced understanding of specialist topics in machine learning, computational finance or information security	1.3.5 Apply well-founded principles to building a complete reliable autonomous intelligent system
6. Advanced ability to work with structured, unstructured, and time-series data	1.1.6 Work with software to automate tasks and perform data analysis and visualisation	1.2.6 Use several symbolic knowledge representation techniques to specify domains and reasoning tasks of a software agent	

7. Analysing, problem-solving, decision-making	1.1.7 Work with methods and techniques such as clustering, regression, support vector machines, boosting, decision trees, neural networks		
8. Advanced ability to abstract and synthesise information			
9. Identify and analyse issues of ethical significance in applications of technology	1.1.9 Comprehensive understanding of a range of recent ethical/social/political/economic issues in applications of machine learning and advanced computing	1.2.9 Independent analysis of issues arising from applications of machine learning and advanced computing.	
10. Advanced ability to present logical and coherent written arguments of varying lengths			1.3.10 Managing time and resources effectively, by drawing on planning and organisational skills
11. Deep understanding of how the role of an AI specialist fits into the functioning of an organisation based on first-hand experience.			

Section 7 - Teaching, learning and assessment

Teaching and learning on the course is closely informed by the active research of staff, particularly in machine learning and data science.

Teaching and learning is mostly by means of lectures, small group tutorials, laboratory sessions, coursework assignments, and a supervised individual project. Assessment of knowledge and understanding is typically by coursework assignments, quizzes, examinations, and a dissertation. A coursework assignment is usually a problem solving exercise that consists of theoretical questions and practical tasks applying the methods to real data.

Contact hours come in various forms and may take the form of time spent with a member of staff in a lecture or seminar with other students. Contact hours may also be laboratory or, studio-based sessions, project supervision with a member of staff, or discussion through a virtual learning environment (VLE). These contact hours may be with a lecturer or teaching assistant, but they may also be with a technician, or specialist support staff.

The way in which each module on your degree course is assessed will also vary. Assessments designated as 'summative' will receive a mark which will count towards your overall mark for the module, and potentially your degree classification, depending on your year of study. On successful completion of the module, you will gain the credits listed.

More detailed information on modules, including teaching and learning methods, and methods of assessment, can be found via the online [Module Catalogue](#). The accuracy of the information contained in this document is reviewed regularly by the university and may also be checked routinely by external agencies.

Section 8 – Additional costs

There are no single associated costs greater than £50 per item on this degree course.

These estimated costs relate to studying this particular degree course at Royal Holloway. General costs such as accommodation, food, books and other learning materials and printing etc., have not been included, but further information is available on our website.

Section 9 – Indicators of quality and standards	
QAA Framework for Higher Education Qualifications (FHEQ) Level	7
Your course is designed in accordance with the FHEQ to ensure your qualification is awarded on the basis of nationally established standards of achievement, for both outcomes and attainment. The qualification descriptors within the FHEQ set out the generic outcomes and attributes expected for the award of individual qualifications. The qualification descriptors contained in the FHEQ exemplify the outcomes and attributes expected of learning that results in the award of higher education qualifications. These outcomes represent the integration of various learning experiences resulting from designated and coherent courses of study.	
QAA Subject benchmark statement(s)	http://www.qaa.ac.uk/quality-code/subject-benchmark-statements
Subject benchmark statements provide a means for the academic community to describe the nature and characteristics of courses in a specific subject or subject area. They also represent general expectations about standards for the award of qualifications at a given level in terms of the attributes and capabilities that those possessing qualifications should have demonstrated.	

Section 10– Intermediate exit awards (where available)		
You may be eligible for an intermediate exit award if you complete part of the course as detailed in this document. Any additional criteria (e.g. mandatory modules, credit requirements) for intermediate awards is outlined in the sections below.		
Award	Criteria	Awarding body
PG Diploma	Passes in at least 120 credits, with fails of between 40% to 49% for up to 40 credits condonable (with the exception of any course specific requirements).	Royal Holloway and Bedford New College
PG Certificate	Passes in at least 60 credits with no condonable fails	Royal Holloway and Bedford New College
